

Milestone 4: Security and Business Logic

Objective

Implement access control and automation rules.

Step 1: Create Custom Role

Navigation:

sys_user_role.list

Role:

x_company.employee_id_manager

Assign role to manager.

Step 2: Create ACL

Write ACL:

Only managers can update Approval Status.

Read ACL:

Employees can view their own requests.

Step 3: Create Business Rule

Purpose:

Automatically set Approval Status to Requested when a new request is created.

Result:

Every new request starts with Requested status.

Step 4: Create Status Synchronization Rule

Approved:

Status = Approved

Rejected:

Status = Rejected

Learning Outcomes

- Implemented ACL security.
 - Created custom roles.
 - Developed Business Rules.
 - Secured application data.
-
